

Quick Draw® II Silo

We are proud to unveil the latest evolution in hot mix storage: the **Quick Draw® II**—the fastest silo load-out in the world just got faster. You can load a 25-ton truck in less than 10 seconds.

The **Quick Draw® II**: is a unique concept that combines both fast load-out time and reduced segregation in a simple, rugged package. The silo system eliminates the jogging or reversing of trucks while on the scale.

Among the other key features:

The exclusive **Quick Draw® II** elliptical gate design (*patent pending*), which spans the entire width and length of the truck totally eliminates the jogging or reversing of trucks while on the scale, making it the fastest silo load-out in the world.

The large steep-sided dispensing cone allows the hot mix asphalt to drop and flow quickly filling uniformly the truck bed with hot mix. The twin opposed clamshell gates open outward and close inward to insure the cleanest operation, without slinging or throwing material, allowing hot mix to drop directly into the truck bed for improved overall load-out efficiency without segregation. The load fills evenly across the entire truck bed in one drop so you can completely load a typical 25 ton truck in under 10 seconds.

In addition, unlike typical silos the **QuickDraw® II**'s unique rectilinear cone design draws hot mix across the entire bottom of the silo evenly and smoothly, virtually eliminating the hour-glass effect and segregation, creating more usable storage volume and more even flow. The result is improved quality and consistency of the hot mix going to the paver, without the need to re-handle or re-mix.

Like all Gencor silos, **Quick Draw® II** silos include the best safety features in the industry, with three separate independently driven safety-gates to prevent accidental overloading in the unlikely event the primary gates fail and a cross beam support design to eliminate the chance of bottoming-out.

Best of all, the speed, durability and safety of the **QuickDraw® II** silo system means faster turnaround at your plant, thus less time lost for your trucks and also improved mix quality.

Quick Draw[®] II

Take a look at the many benefits of the new **Quick Draw[®] II**:

- Steep 66° cone
- Elliptical gate opening
- Larger cone volume
- Faster loading in under 10 seconds
- No reversing of trucks
- Reduced segregation
- Independently driven safety gates

The exclusive patent pending **Quick Draw[®] II** gates system loads trucks in seconds.

Silo	Tub Length	Straight Length	Deck Height	Total * Capacity
350	56'	44' 6"	71'	356 ton
300	49'	37' 6"	64'	305 ton
250	42'	30' 6"	56'	253 ton
200	35'	23' 6"	49'	202 ton
150	28'	16' 6"	42'	151 ton

*120 lbs. per cubic foot
